

Polymer-Modified Cementitious Plaster

PLASTER & SURFACE PREPARATION

PRODUCT OVERVIEW

A ready-mixed polymer-modified cementitious plaster for preparing concrete and masonry surfaces. A single-component dry powder mixed with water, suitable for vertical and overhead applications.

TYPICAL APPLICATIONS

- Interior and exterior concrete or masonry wall plastering
- Hand-applied or machine-sprayed finishing and leveling
- Vertical and overhead surfaces, subject to substrate preparation

REFERENCE TECHNICAL CHARACTERISTICS

Form:	Cementitious dry powder; white or grey
Typical application:	Trowel or spray; up to 25 mm per coat
Working life:	About 1 hour
Reported strength:	> 6 MPa compressive at 28 days (wet cure)
Typical packaging:	25 kg or 50 kg bags

IMPORTANT SELECTION NOTE

Prepare clean substrates and follow the approved installation method. Check suitability for thickness, climate, and curing procedure.
