

Cementitious Plaster Bonding Key Coat

PLASTER & SURFACE PREPARATION

PRODUCT OVERVIEW

Pre-mixed, polymer-modified cementitious key coat formulated to create a mechanical bonding layer between smooth cement-based substrates and subsequent cementitious plaster.

TYPICAL APPLICATIONS

- Bond coat to fair-faced concrete and concrete with microsilica
- Key coat for standard or lightweight masonry block
- Internal and external cementitious plaster systems

REFERENCE TECHNICAL CHARACTERISTICS

Form:	Single-component grey cementitious powder
Application:	Spray gun or textured dash coat
Working time:	Approximately 100 minutes
Typical reference consumption:	About 5.9 kg per square metre at 3 mm thickness
Typical packaging:	25 kg or 50 kg bags

IMPORTANT SELECTION NOTE

Actual consumption depends on substrate texture and application method. Follow surface wetting and cement-based curing instructions.
