

Self-Curing Mortar Performance Additive

MORTAR ADDITIVES

PRODUCT OVERVIEW

Powder-and-liquid additive pack for cement-sand mortar. The supplied technical sheet describes improved control of drying-shrinkage cracking, bond performance and water resistance in selected mortar uses.

TYPICAL APPLICATIONS

- Cement plaster and brick binding mortar
- Mortar used with AAC blockwork
- Selected cement-based repair mortar applications

REFERENCE TECHNICAL CHARACTERISTICS

Form:	Two-part pack: liquid plus powder
Typical dosage:	One full sachet for each cement bag up to 50 kg
Preparation:	Dry-mix powder; add liquid to mixing water
Relevant applications:	Plastering, masonry and selected mortar repairs
Documented benefit:	Shrinkage/crack-control and reduced-curing claims

IMPORTANT SELECTION NOTE

Curing reduction is application-specific: do not omit required curing without confirming the current full technical instructions and project specification.
